

Webmention

Рекомендация по рекомендации

пост

Обо мне

- работаю в VK;
- 8 лет в разработке;
- люблю писать блоги.

ЭТО МОЙ
БЛОГ

О чём поговорим?

1. **Вступление:** почему мы хотим свой блог?
2. **Webmention:** что дает и как сделать себе?
3. **Заключение.** Что дальше?

I. Зачем личный сайт?

Poll time! Help settle a debate between [@anomalily](#) and I about kitchen cabinets in the most recent House Files episode. Which looks better for the cabinets around the fridge?

- blue to match the base cabinets
- white to match the upper cabinets

Portland, Oregon, USA • 49°F

Mon, Apr 10, 2023 4:41pm -07:00

[gRegor Morrill](#) [gregorlove.com](#)

Blue and white stripes!

Sun, Apr 16, 2023 11:38am -07:00

[tracydurnell](#) [micro.blog/tracydurnell](#)

[@aaronpk](#) I think white looks more streamlined, though could see the blue working if you want something a little funkier. The blue draws attention and usually you want the fridge to visually disappear.

Tue, Apr 11, 2023 9:50pm +00:00

[hollie](#) [micro.blog/hollie](#)

[@aaronpk](#) To my eye blue is the obvious winner.

Tue, Apr 11, 2023 8:30pm +00:00

[agilelisa](#) [micro.blog/agilelisa](#)

[@aaronpk](#) How about white on top and blue for that lower cabinet? If that's not an option, I vote for blue.

Tue, Apr 11, 2023 4:34pm +00:00

[carpetbomberz](#) [mastodon.online/users/carpetbomberz](#)

[@aaronpk](#) With the wider, whole room render of the kitchen, definitely white to match the upper cabinets. With this smaller cropped-in view of the Black Fridge, blue to match the base cabinets. I vote WhOLE Kitchen view and white to match the upper cabinets.

Из чего состоит **webmention**:

- **пишем** ответ на пост;
- **посылаем** на специальный сервер;
- **сервер обрабатывает** ответ и получатель узнает о вас. И что-то делает с этой информацией.

Из чего состоит **webmention**:

```
let formData = new FormData();

formData.append('source', null);
formData.append('target', null);

const response = await fetch (null, {
  method: 'POST',
  body: formData
})
```

yepstepz commented on Dec 18, 2023

Hi! I want to contribute to brid.gy and add an integration with OpenLibrary.

Would be great to get notifications about the books I read, and since Goodreads deprecated their API, the best option could be the [OpenLibrary](#).

The easiest option is to start from the listening part. They do not have any oAuth options right now, but API is available for GET option: <https://openlibrary.org/developers/api>

So what I think:

Brid.gy

After crawling and getting updates, bridgy could form a post. There is a discussion about some properties here [microformats/h-entry#10](#), so I need to research it further.

What do you think? I also have plans for investigating posting possibility, but wanted to check if this idea is ok v

Interesting, thanks for filing!

The vision and ideas here are pretty broad and wide-ranging. Could you give a specific example of an OpenLibrary post that you syndicated/cross-posted from an original post on your site, and the response(s) to it on OpenLibrary that you'd hope to [backfeed](#) to that original post as webmentions? And what existing microformats2 you'd expect those backfed responses to use? (We generally prefer to use existing, established microformats2 instead of new ones that aren't used in the wild anywhere yet.)

It also sounds like much of what you're interested in here is more like [PESOS](#), ie *copying* posts from inside OpenLibrary onto your site? PESOS is great, but it's generally out of scope for Bridgy specifically.

I'm still open to ideas here though! Especially if we can start with concrete examples.

Not on my web site, but I have this example <https://gregorlove.com/2023/05/reading-funny-in-farsi/>. As far as I know, you can't officially use goodreads API, so it's probably posted manually. So the idea is: I post a book that I started reading, and somehow it was sent to the OL (you can make bots which could publish data, but let's say it has already been published).

wanted to check if this idea is ok with you.
